

Solace

A privacy-first, end-to-end encrypted chat platform with team workspaces

The problem we want to solve

1

Providers can read your chats

Most messengers keep messages in a form the service can read, so a breach, insider or legal request exposes everything.

2

Work is scattered across tools

Chat, tasks, calendars and files live in separate apps, so context is lost the moment work leaves the conversation.

3

Privacy and collaboration rarely coexist

Encrypted apps are mostly chat-only; collaboration tools are rarely private. Teams must pick one.

Our proposed solution

The idea

One web app where every message is encrypted in the sender's browser, so the server only ever stores ciphertext, and where any group chat can become a shared workspace.

Not built yet — this review proposes the plan.

- 1 Real-time one-to-one and group messaging
- 2 Encrypt and decrypt only in the browser; server never sees plaintext
- 3 Safe group membership changes (add / remove members)
- 4 Encrypted images, files and voice messages
- 5 Tasks, events, notes and polls inside any group
- 6 Secure accounts and sessions; one simple database

Planned features

Private messaging

- 1-to-1 and group chat with live delivery
- Read receipts and typing indicators
- Edit, delete, reply, reactions, search
- Encrypted media and voice notes
- Disappearing and scheduled messages
- Block and report; voice / video calls

Team workspace

- Task board with status and priority
- Shared calendar with RSVP
- Notes and a decisions log
- Polls with live results
- File library for shared files
- Create a task or event from any message

Proposed architecture and tech stack

Key principle Keys are created on the user's device and never leave it unencrypted. The server stores and routes ciphertext only. Standard WebCrypto (ECDH, HKDF, AES-GCM) — no custom cryptography.

Project plan and milestones

Review 1

Review 2

Final

Proposal, scope, design
and tech stack

Accounts, key setup,
basic 1-to-1 messaging

Groups, media, receipts,
first workspace features

Calls, full workspace,
testing, deployment and
report

Status today: proposal stage — no implementation started.

EXPECTED OUTCOME

A private messenger that also helps teams get work done

- 1 Conversations only participants can read
- 2 One place for chat, tasks, events and files
- 3 A self-hostable, open design that is easy to run
